Equipment Inventory Module

Introduction

The purpose of the Equipment Inventory module is to allow a fleet of machines/equipment/other to be surveyed for each individual Third Party, typically a Customer. Main feature of the module is to allow complete flexibility in defining the columns that will make up the inventory, specifying the name and type of data (text/date/number etc.) thus allowing the module to be adapted to the management of different types of equipment/products.

Once you have defined the fields you wish to have in your inventory, it is possible to "lock in" any changes by simply setting a constant, thus preventing accidental changes to the settings, changes that can still be reactivated by deactivating the constant.

Settings

The first operation is to define the columns you wish to have to census an individual piece of equipment; in the proposed example we will examine an inventory of computer equipment. In the form setup, a tab appears called DB Setup (DB Setup). Using the + button in the upper right corner it will be possible to define a new field to be added to the existing ones. When first installed, of course, the list of columns will be empty.

Through the symbols on the line it will be possible:

- Edit the field, via the pencil symbol
- Delete the field using the trash symbol
- Reorder the columns by the matrix symbol, going over, clicking and dragging the row to the new position.

NOTE: Deleting a field will not only delete the definition of that field, but will cause the deletion of all data, related to that field, already entered in the various third parties. This is an irreversible operation. In fact, if there is data already entered in one or more third parties, the warning message in red appears above the table.

	ents Inventory Setup				
DB Se	tup Settings Complementary attributes	s About			
					•
tabase fiel	ds list				C
RNING The	e equipments inventory contains data, deleting a	column will permanently loose the da	ta entered in this column		
eld order	Field label		Field values		
ela order		Field type 0			
	Product type	select	Desktop;Laptop;Monitor;Inkjet;Laser;Multifunction	/ 1	
	Product type Model code	text	Desktop;Laptop;Monitor;Inkjet;Laser;Multifunction	/ =	
			Desktop;Laptop;Monitor;Inkjet;Laser;Multifunction		
	Model code	text	Desktop;Laptop;Monitor;Inkjet;Laser;Multifunction Yes;No	/ =	
	Model code Serial number	text text		/ 1	
	Model code Serial number Service contract	text text select		/ # / # / #	

When adding a new field the following screen will appear:

Field label 0				
Field type 🕕	v			
Field values 0				
				11
ield order				

For each field it will be necessary to indicate:

- 1. The column label that will appear in columns and printouts
- 2. Column type, which may be:
 - a. Text
 - b. Selection box
 - c. Whole number
 - d. Number with decimal places
 - e. Date
- 3. Column values, this item applies only to column type selection box, you will need to indicate the values that will appear in the drop-down selection box, listing them one after the other separated by ; without spaces. So a list **Yes;No** is fine while **Yes ; No** is incorrect
- 4. Column sorting is not fillable and is only indicative of the odine assigned to the column when confirming settings

Having defined all the columns you want the configuration operation is finished, to avoid inadvertently changing the settings and to prevent changes to others you can set in the **Home->Settings->Other Settings** menu a constant named **MLAB_EQINVENT_NOADMIN** with value **1**. To allow changes to the settings, it will be enough later to set this constant to the value **0**.

Third Party Equipment Inventory Management

Once the module configuration is done in the screen related to a third party a new tab will appear named **Equipment inventory** (Equipment inventory)

	Third-party	Contacts/Addresses	Customer	Related items	Payment methods	Tickets	Margins	Notes	Linked files	Events/Agenda	Equipments Inventory
J		igCompany Italy									
Natur	e of Third party	C								Customers tag	gs/categories
Custo	mer Code	CU23	309-01520							Third-party typ	e 🖉 Large company
Barco	de									Workforce	
EORI	number									Business entit	y type
VATI)									Capital	

Selecting that tab will bring up a list of surveyed equipment, with search and sorting capabilities, as in all similar Dolibarr screens

Nature of Third party	(C						
Customer Code		CU2	304-01519					
Equipments Invent	tory (1)						25 🗸	0
					From III			Q ×

2	Desktop	PC-1234-AX	1234567890A123	Yes	12/31/2023	250.0000000		

Again via the usual + button it will be possible to insert a new line

Technical ID	A 100 March 1	
Third-party 0	BigCompany	
roduct type	· · ·	
lodel code		
erial number		
ervice contract	¥	
ervice contract end	III Now	
ervice contract price		
ocation map		

Additional printouts

This module also adds 3 printouts to the third party tab that can be activated in the settings of Dolibarr's Third Party module. The three printouts are:

- 1. Third Party Master and Contacts Create a PDF with the third party's basic master data with a list of all the third party's contacts.
- 2. Equipment inventory Create a PDF listing all equipment surveyed for the third party
- 3. Activities Creates a PDF listing all activities performed on the third party **NOTE: This report only** makes sense if you have installed the Advanced CRM module developed by others. Otherwise it will result in a document with an empty table.
